

Your personal requirements / prerequisites

You need to have a sound technical qualification for the building of nature-orientated swimming / bathing waters. Ideally you have successfully concluded the formation for "Landscape Gardener". Additionally you have the respective construction-site experience in Landscaping. You are actively involved and working in a landscaping company, which (also) builds swimming / bathing ponds. For reasons of reference you can prove having yourself constructed such a pond or of having been involved in the construction of several of them.

Your personal expectations and goals

- You wish to acquire a broad knowledge of as well as the capability to build operationally stable and long-lasting swimming / bathing ponds.
- As contractor and company owner you plan to position your "Landscaping enterprise" in an exclusive segment of the market for "swimming / bathing-ponds" through superior know-how.
- As site foreman or site manager you aim for a professional specialization in the construction of nature-orientated swimming / bathing ponds or biological clarification plants.
- For your future planning and expert operation you aim to be perfectly acquainted with the execution and engineering practice according to the state-of-art.

Facts worth knowing

Duration of Advanced Training Course

3 modules (each 2 weeks) distributed over one year

Award conferred after successfully completing course

Qualified Swimming Pond Constructor (awarded by: Deutsche Gesellschaft für naturnahe Badegewässer e.V. / German Association for Nature-Orientated Swimming / Bathing Waters)

Dates

Module 1	09.01.2012 – 14.01.2012 and 16.01.2012 – 20.01.2012
Module 2	16.07.2012 – 21.07.2012 and 23.07.2012 – 27.07.2012
Module 3	03.12.2012 – 08.12.2012 and 10.12.2012 – 14.12.2012

Fees

Course fees for members*: 2.975,00 € / Module
Course fees for non-members: 3.570,00 € / Module

Prices plus 19 % VAT

* International Association for Nature Orientated Swimming / Bathing Waters (IOB)

Qualified Swimming Pond Constructor

Advanced Training Course

Acquire the expertise for the construction of nature-orientated swimming / bathing waters according to present standards.

This course is offered in cooperation with the Deutsche Gesellschaft für naturnahe Badegewässer e.V.

THE BUILDING OF SWIMMING / BATHING WATERS WITH STABLE SELF PURIFICATION

This training course is directed towards landscape gardeners from companies in the landscape gardening and sports field facilities construction industries. The goal is a sound technical qualification for the construction of nature-orientated swimming / bathing waters.

Effective modes of learning

Modular Weeks

The course consists of three two-week modules spread over one year. The central idea of the course concept is reflected in the combination of classroom, preparation and practical phases. In the phases of work experience professionals provide the necessary knowledge and practical craft skills. With their professional experience, the individual speakers guarantee that the subject matter is up-to-date.

Transfer

Between the modules, participants are still actively employed in their functions in landscaping companies. The close link with the day-to-day work guarantees a high transfer of knowledge. During the phases of their usual working activity the course participants implement their acquired knowledge in the actual construction of pools. The scripts and course material handed out serve as valuable information and reference sources.

Supervision by Tutors and Instructors

All instructors and tutors are really well acquainted with the planning and engineering of swimming / bathing pond construction. They will be accessible and responsive by e-mail throughout the entire training course.

Model pond building site

A model pond will serve as a demonstration aid and represents the groundwork for the essential practical exercises of each module of the course. The subject matter will include practical examples, group work and demonstrations under real-time conditions and will be rehearsed under professional guidance. Students will be required to write essays about the construction of the model pond thus deepening their knowledge of the essential course contents. The essays will be presented to the group and discussed with the Course Instructor.

Swimming / bathing pond site excursions

Several visits to construction sites of sophisticated nature-orientated swimming / bathing ponds in Munich and vicinity will contribute to the practical implementation of knowledge in the daily engineering and construction work. Especially profitable always is the openness of the local site managers, who gladly explain operating principles and the technical approach to the construction work and also discuss troubleshooting of any problems encountered.

Deutsche Gesellschaft für naturnahe Badegewässer e.V. (DGfNB)

The German Association for Nature-Orientated Swimming / Bathing Waters has been founded with the primary objective in mind of futhering and propagating nature-orientated swimming / bathing ponds which incorporate fully biologically water purification. As initiator and responsible body for these training courses, it is the goal of the DGfNB to train and shape experts with sound practical skills and excellent know-how. The DGfNB-society guarantees expert national and international speakers with a wealth of experience of many years for an up-to-date knowledge transfer. The course subject matter is permanently updated by the DGfNB in line with actual practice and acknowledged rules of technology.

What distinguishes the advanced training courses for "Qualified Swimming Pond Constructor"?

Trade reference: Focusing of content on landscape gardening
Course Director: Dipl.-Ing. Guido Manzke (ö.b.v. expert for nature-orientated swimming / bathing ponds in garden and landscaping)

Networking: Intensive exchange of experience with English-speaking colleagues from various countries

Consolidation: Concentration with regards to consolidation on planning, engineering and maintenance of nature-orientated swimming / bathing ponds and intensive background knowledge and understanding of water chemistry and biology

Dates: All events take place in the winter half-year, with exception of one excursion module

The training course is structured in modules.

Module 1

Basics
Construction Technique I
Construction Technique II

Module 2

Swimming Pond Ecology I
Swimming Pond Ecology II

Module 3

Design and Maintenance
Model Building Site
